Docosanol Cream Pregnancy

Docosanol, also known as behenyl alcohol, is a saturated fatty alcohol used traditionally as an emollient, emulsifier, and spreader. It is also a constituent of policosanol. More recently, docosanol has been approved by the Food and Drug Administration (FDA) as a pharmaceutical antiviral agent.

Docosanol (Abreva®) is a cream used to treat cold sores or fever blisters caused by the herpes simplex virus. It is approved for use in adults, and there are no adequate and well-controlled studies in pregnant women.

Administration (FDA) as a pharmaceutical antiviral agent effective against activity viruses with a lipid envelope, including herpes simplex virus, and is approved for treating cold sores and fever blisters caused by the herpes simplex virus.
