INK-EEZE Bio Gel is a granular polymer that melts a gel-like material with the addition of liquid. It is designed to provide tattoo artists with safer and effective cleanup and disposal of any liquids associated with the tattooing process. It helps for better containment of biological fluids than regular disposal methods.

INK-EEZE Bio Gel is a granular polymer that melts a gel-like material with the addition of liquid. It is designed to provide tattoo artists with safer and effective cleanup and disposal of any liquids associated with the tattooing process. It helps for better containment of biological fluids than regular disposal methods.
